

## We call on the new Australian Parliament to declare a climate emergency and initiate a society-wide World War Two scale climate mobilisation.

We have just experienced the hottest year on record. Earlier this year, there was an alarming global temperature spike above 1.6°C of warming, just months after the Paris Climate talks set an aim of not exceeding 1.5°C. Our Great Barrier Reef and ancient world-heritage Tasmanian forests are dying. The survival of ecosystems and the future of human civilisation now hang in the balance.

We must devote all the resources necessary to preserve a liveable planet and to protect the vulnerable from the dangerous climate impacts already locked in. Carbon emissions must be reduced to zero within years, not decades, and we must safely draw down the excess carbon dioxide already in the atmosphere.
